- 6x Tamper Evident Labels
- 1x Door Warning Label
- 1x Microdot Applicator
- 1x UV Pen
- 1x UV Torch
- 1x Lint Free Microfibre Cloth

FITTING INSTRUCTIONS

Please read carefully before commencing installation, exercise caution when removing the protective film or backing material of the labels and lozenges as they contain security cuts and it is possible to damage the item.

Fitting the RFID Chip

When choosing a location for your chip, bear in mind that it must be capable of being read by a police scanner at 6m distance when travelling up to 60mph. The front and rear cupboards and wardrobes are potential locations for the application. Determine your location for the chip, ensuring that you have a large enough area.

Ensure the surface is clean and dry, remove the backing paper and firmly rub the chip onto the surface. The police need to be able to read the chip from outside the caravan. It can be read through almost any non-metallic surfaces such as wood, glass, glass-fibre reinforced plastic etc.

Fitting the Door Warning Label

Ensure the window area that you have chosen to place the door warning label is dry and clean of grease and dirt by wiping the area with the microfibre cloth. Carefully remove the protective film of the label and firmly rub onto the window surface ensuring no air bubbles are present.

Fitting the Internal Tamper Evident Labels

The internal tamper evident labels can be placed in any position you choose. These are often best used on the inside of cupboard doors or the underside of drawers. Each tamper evident label is made of tamper evident material designed to chip upon any attempt at removal. Ensure the area is dry and clean of the dirt and grease. Carefully remove the protective film of the label and firmly rub onto the surface ensuring no air bubbles are present.

Using the Ultraviolet Security Pen

A simple and easy way to further enhance the identity of your caravan is to write your home postcode on any removable items with the UV Pen

Using the Ultraviolet Torch

Once you have marked your caravan and any additional property using the ultraviolet security pen you can use the torch to view the markings, as ultraviolet ink is invisible to the naked eye.

Using the Microdot Applicator

The microdots should be applied over as wide an area as possible to give maximum coverage. Choose the area to apply the dots carefully, remembering they need to be accessible. Do NOT place on removable objects. It is fast, efficient and easy to apply. Simply squeeze the applicator and brush on the micro dots where you want them to be applied. The dots will show as black specks on lighter surfaces.

Health & Safety for Lozenges & Labels: Your safety in fitting this kit is of paramount importance, fitting your VIN CHIP™ kit is a non-hazardous process providing you follow the instructions carefully. These products are neither hazardous nor toxic, labels and lozenges may produce an allergic reaction if not handled correctly.
